Contents

Part I: Foundations and Game Systems

1 Game Version, Names, and Guide Conventions

- 1.1 Game Version
- 1.2 Names

2 Controls, Exploration, and Progression

- 2.1 Controller inputs, field commands, and menu navigation
- 2.2 Data and status screens: attributes, experience, and equipment
- 2.3 Dialogue, searching, drawers, pots, chests, and hidden objects
- 2.4 Day and night: access, shops, events, and changing time
- 2.5 Doors, keys, moving obstacles, floor hazards, and puzzles
- 2.6 Inventory ownership, item transfer, capacity, and equipment use
- 2.7 Inns, churches, saving, revival, and status recovery
- 2.8 Banks, gold storage, shopping, and selling
- 2.9 Travel progression: walking, wagon, ship, carpet, castle, and dragon
- 2.10 Return destinations, Outside, maps, and safe backtracking

3 Combat, Tactics, and Party Management

- 3.1 Battle commands, target groups, turn order, and escape
- 3.2 Physical attacks, critical hits, multi-target weapons, and damage
- 3.3 Spells, special abilities, MP, and reusable battle items
- 3.4 Status ailments, buffs, debuffs, resistance, and spell reflection
- 3.5 AI tactic modes and when to use direct commands
- 3.6 Intelligence, obedience, and monster command restrictions
- 3.7 The three-member active party and wagon reserves
- 3.8 Changing members, wagon access, experience, and dungeon restrictions
- 3.9 Healing economy, resource conservation, and boss preparation
- 3.10 Enemy summoning, metal enemies, defeat, and recovery

Part II: Complete Three-Generation Walkthrough

4 First Generation: Childhood

- 4.1 Birth scene, the opening ship, and Vista Port
- 4.2 Santa Rosa: Sancho, Bianca, supplies, and the missing herbalist
- 4.3 Santa Rosa Cave: rescue route, treasure, and early training
- 4.4 Alcapa / Alkapa: Bianca's home and the captive panther
- 4.5 Lenoire Castle: entry, separated companions, darkness, and the torch
  - 4.5.1 Ghost-boss preparation and battle strategy
  - 4.5.2 Golden Orb, the panther's names, and Bianca's departure
- 4.6 Santa Rosa revisited: Bella and the route to the faerie realm

4.7 Faerie Village and the Dwarves Cave: Thieves' Key knowledge
4.8 Ice Mansion: sliding-floor route, Zaile, and the final boss
4.9 Flute of Spring, returning home, and childhood loose ends
4.10 Reinhart Castle: Henry's disappearance and the kidnapping
4.11 Thieves Cave: Henry's rescue, Gema, and the scripted transition
4.12 First-generation treasure and pre-transition checklist

5 Second Generation: Escape and Reinhart
5.1 Captivity, Maria, Henry, and escape from the Great Temple
5.2 The Nameless Nunnery: recovery and the first travel objective
5.3 Oracleberry / Oracle Valley: shops, wagon, map, and monster storage
5.3.1 First monster recruits and party-building opportunities
5.3.2 Casino introduction and optional early prize planning
5.4 Santa Rosa Ruins and the adult return to Santa Rosa Cave
5.4.1 Papas' Letter, the Zenithian Sword, and deeper treasure
5.5 Alcapa revisited: the inn, rumors, and preparations for Reinhart
5.6 Reinhart Castle basement: entry route, prisoners, and the key
5.7 Nunnery return and Maria's role at the Southern Tower
5.8 Southern Tower: floor route, Mirror of Ra, and treasure
5.9 The False Queen, restored Reinhart, and Henry's departure
5.10 Reinhart-region cleanup and the next continent

6 Second Generation: Port Selmi and Marriage
6.1 Port Selmi: the tavern confrontation and Kabochi request
6.2 Kabochi and the West Kabochi Cave
6.2.1 Bianca's Ribbon and reunion with the Killer Panther
6.2.2 Papas' Sword, the village reward, and available recruits
6.3 Ruraphin: Benett, the Lunar Herb, and learning Return
6.4 Ruraphin South Cave and the road to Salabona
6.5 Salabona: Ludman, Flora, and the wedding prerequisites
6.6 Volcano Cave: route, hazards, treasure, and the Ring of Flames
6.6.1 Lava Men battle and sustainable healing
6.7 Mountain Village: Duncan, Bianca, and opening the river route
6.8 Waterfall Cave: treasure route and the Ring of Water
6.9 Choosing Bianca or Flora
6.9.1 Party availability, spell progression, and route differences
6.9.2 Wedding preparations, Silk Veil, and the ceremony
6.9.3 Post-wedding gifts, ship access, and what the choice does not change
6.10 Marriage-region treasure and optional-objective checklist

7 Second Generation: The Road to Granvania
7.1 The first sea journey and optional coastal stops
7.2 Medal King Castle, islands, shrines, and travel planning
7.3 Telepador: desert approach and the Zenithian Helmet test
7.4 Mountain Cave, west side: ascent, treasure, and resources
7.5 Chizod / Chizot: the village and the mountain crossing
7.6 Mountain Cave, east side: descent and hidden treasure
7.7 Granvania / Granbania: Sancho, Ojiron, family, and castle searches

7.8 Cave of Trials: puzzles, the Symbol of Royalty, and Kandar
7.9 Coronation, the twins, and the missing queen
7.10 Flying Shoes, the Northern Shrine, and the Demon Tower approach
7.11 Demon Tower: moving floors, treasure, and gatekeeper battles
7.11.1 Orc and Wyvern gatekeepers
7.11.2 Jami, the final confrontation, and the generation transition
7.12 Second-generation completion and carryover checklist

8 Third Generation: Reunion and El Heven
8.1 The years in stone, rescue, and the return to Granvania
8.2 The twins, Sancho, Pippin, and rebuilding the active party
8.3 Zenithian equipment checklist and the son's role
8.4 Reinhart revisited: Henry, Del, and family-related rewards
8.5 Northern Church, small shrines, and northeast exploration
8.6 Water Shrine / Water Cave: the passage to El Heven
8.7 El Heven: family history, the Magic Key, and the Magic Carpet
8.8 Newly accessible towns, islands, treasure, and monster recruits
8.9 Return to Telepador and collection of the Zenithian Helmet
8.10 Route-order options and prerequisites for restoring Zenithia

9 Third Generation: Restoring Zenithia
9.1 Sky Tower: floor route, treasure, and the Magma Staff
9.2 Opening the mountain barrier and entering Torokko Mines
9.3 Torokko Mines: trolley switches, loops, Pusan, and the lake
9.4 The sunken Zenithian Castle and the missing Golden Orb
9.5 Forest of Illusions: navigating the maze with a child
9.6 Faerie Village, the Horn of the Fairies, and Faerie Palace
9.7 The childhood return and the Golden Orb exchange
9.8 Restoring Zenithia and unlocking castle travel
9.9 Salabona's sealed jar, Buorn / Bohen, and the Final Key
9.10 Final Key cleanup and the Royal Cloak side route
9.11 Tower of Boble: Grappling Hook, dragon statue, and floor route
9.11.1 Gonz, Gema, and the two Dragon Eyes
9.11.2 Dragon Orb, Zenithian Armor, and remaining tower treasure
9.12 The Master Dragon and Zenithian Bells
9.13 Great Temple: entry, captivity rooms, and party restrictions
9.13.1 Temple guardians, the high priest, and the wife's rescue
9.13.2 Ring of Life and preparations for the Demon World

10 Third Generation: The Demon World and Ending
10.1 Water Shrine revisited and the three-ring portal
10.2 The Demon World overworld: routes, encounters, and recruitment
10.3 Shahanna: shops, inn, final equipment, and safe preparation
10.4 Evil Mountain: entrance, summit route, and family reunion
10.5 Sacred Pitcher, lava removal, floor loops, and navigation puzzles
10.6 Sage's Stone, Sands of Time, and the final treasure sweep
10.7 Final guardians and preparation for Mildrath
10.8 Mildrath's first form: tactics and summoned enemies

10.9 Mildrath's second form: healing, defenses, and sustained damage
10.10 Ending tour, credits, clear-state behavior, and postgame access
10.11 Final-dungeon and pre-ending completion checklist

11 Postgame and the Bonus Dungeon
11.1 Bonus Dungeon entrance and access prerequisites
11.2 Floor-by-floor route, branching passages, and puzzle solutions
11.3 Bonus treasure, the Drum of War, and unique equipment
11.4 Rare companions and postgame recruitment routes
11.5 Estark / Esterk: party setup, resistances, healing, and strategy
11.6 Repeat battles, challenge goals, and remaining completion tasks

Part III: Characters, Monster Companions, and Abilities

12 Human and Temporary Characters
12.1 Profile fields: availability, role, attributes, spells, and equipment
12.2 The Hero: childhood, adulthood, and event-learned spells
12.3 Bianca: childhood carryover and the adult marriage route
12.4 Flora: second-generation restrictions and later progression
12.5 The Son: Zenithian equipment, support magic, and combat role
12.6 The Daughter: offensive magic, support, and equipment
12.7 Sancho: recruitment, utility, and party role
12.8 Pippin: recruitment, equipment, and physical combat
12.9 Temporary and AI-controlled companions
12.9.1 Papas
12.9.2 Bella / Vera
12.9.3 Henry
12.10 Human spell-learning tables and event-dependent progression
12.11 Marriage comparison and family availability by generation
12.12 Supporting characters and relationship glossary

13 Monster Recruitment and Party Planning
13.1 Recruitment unlocks, wagon ownership, and eligibility
13.2 Battle resolution, enemy groups, recruitment chances, and exceptions
13.3 Guaranteed story companions and random monster recruitment
13.4 Intelligence, direct commands, and improving obedience
13.5 Monster Gramps: storage, retrieval, capacity, and releases
13.6 Repeated species, default names, and roster organization
13.7 Recruitment routes by generation and region
13.7.1 Oracleberry, Santa Rosa, and Reinhart
13.7.2 Port Selmi, Kabochi, Ruraphin, and Salabona
13.7.3 Telepador, mountain routes, and Granvania
13.7.4 El Heven, Zenithia routes, and the sea
13.7.5 Demon World and Bonus Dungeon
13.8 Party roles: damage, healing, support, resilience, and utility
13.9 Recommended teams for each story phase and major boss
13.10 Level caps, training priorities, and late-game replacements

13.11 Rare recruits, metal companions, and realistic collection planning

14 Complete SNES Monster Companion Catalog

14.1 Companion profile fields
14.2 Individual monster profiles
14.2.1 Attackbot
14.2.2 Big Eye
14.2.3 Blizzard Hawk
14.2.4 Bomb Baby
14.2.5 Bomb Crag
14.2.6 Brownie
14.2.7 Centaurus
14.2.8 Curer
14.2.9 Dancing Jewel
14.2.10 Dancing Needle
14.2.11 Dragon Pup
14.2.12 Drakee
14.2.13 Eigerhorn
14.2.14 Eliminator
14.2.15 Farewell Crag
14.2.16 Gigantes
14.2.17 Golem
14.2.18 Great Dragon
14.2.19 Healer
14.2.20 Hellbattler
14.2.21 Hork
14.2.22 Killer Panther: childhood and adult story recruitment
14.2.23 King Healer
14.2.24 King Slime
14.2.25 Kukkle
14.2.26 Leaonar
14.2.27 Lionex
14.2.28 Mad Dragon
14.2.29 Magician
14.2.30 Messala
14.2.31 Metal Babble
14.2.32 Minidemon
14.2.33 Neileus
14.2.34 Orc King
14.2.35 Puppet Man
14.2.36 Slime
14.2.37 Slime Knight
14.2.38 Soldier Bull
14.2.39 Springer
14.2.40 Wyvern
14.2.41 Yeti
14.3 Recruitment-location and availability tables
14.4 Starting abilities, learned abilities, and maximum-level tables

14.5 Equipment groups, resistance comparisons, and party roles
14.6 Companion names and aliases

15 Spells and Special Abilities
15.1 Alphabetical index: MP cost, targets, effects, and users
15.2 Healing, revival, sacrifice, and status recovery
15.3 Offensive magic by family and target pattern
15.4 Instant death, sleep, confusion, silence, and other control effects
15.5 Attack and defense changes, barriers, reflection, and dispelling
15.6 Breath attacks, dances, physical skills, and monster-only abilities
15.7 Travel and field utility: Return, Outside, Stepguard, and time changes
15.8 Event-learned spells: Return and Chance
15.9 Learning-level tables for humans and monster companions
15.10 Item-cast equivalents, AI use, resistance, and reliability

Part IV: Items, Equipment, Enemies, and Bosses

16 Items, Keys, and Story Objects
16.1 Alphabetical item index and acquisition cross-reference
16.2 Healing, status cures, revival, and MP-restoration consumables
16.3 Seeds, acorns, permanent growth, and allocation planning
16.4 Battle items, reusable effects, limited uses, and breakage
16.4.1 Sage's Stone, Drum of War, and Sands of Time
16.4.2 Rings, stones, waters, bells, and situational tools
16.5 Keys and access progression
16.5.1 Thieves' Key knowledge, Reinhart Key, Magic Key, and Final Key
16.6 Childhood and faerie-realm objects
16.6.1 Torch, Golden Orb, Flute of Spring, and Bianca's Ribbon
16.7 Wedding, royal, and rescue objects
16.7.1 Papas' Letter, Mirror of Ra, wedding rings, and Silk Veil
16.7.2 Symbol of Royalty, Flying Shoes, and Ring of Life
16.8 Zenithia and Demon World objects
16.8.1 Magma Staff, faerie horn, orbs, Grappling Hook, and Dragon Eyes
16.8.2 Dragon Orb, Zenithian Bells, and Sacred Pitcher
16.9 Maps, wagon, vehicles, and non-inventory unlocks
16.10 Where to obtain, retain, use, or revisit each key object

17 Weapons, Armor, Shields, Helmets, and Accessories
17.1 Catalog fields: power, prices, locations, users, and special effects
17.2 Complete weapon catalog
17.2.1 Single-target weapons and character restrictions
17.2.2 Whips, boomerangs, repeated attacks, and unusual damage effects
17.2.3 Weapon-cast spells and reusable support tools
17.3 Complete body-armor catalog
17.4 Complete shield catalog
17.5 Complete helmet catalog
17.6 Complete accessory catalog

17.7 Human and monster equipment-compatibility matrices
17.8 Cursed equipment, drawbacks, removal, and sale restrictions
17.9 Elemental protection, status protection, and special properties
17.10 Zenithian equipment: acquisition, eligibility, and checklist
17.11 Casino prizes, Medal King rewards, unique finds, and monster drops
17.12 Recommended upgrades by generation, role, and budget
17.13 Endgame and postgame loadouts for each party member

18 Enemy Bestiary, Encounters, and Treasure Drops
18.1 Bestiary fields: names, HP, rewards, drops, behavior, and locations
18.2 Alphabetical enemy catalog
18.2.1 Enemies A–F
18.2.2 Enemies G–L
18.2.3 Enemies M–R
18.2.4 Enemies S–Z
18.3 Overworld encounter tables by region and generation
18.4 Dungeon encounters by floor and route
18.5 Sea encounters and vehicle-dependent access
18.6 Metal enemies: locations, escape behavior, and training tactics
18.7 Mimics, trapped chests, summoned enemies, and fixed encounters
18.8 Drop tables and item-to-monster reverse index
18.9 Recruitable flags and differences between enemy and companion data
18.10 Boss entries and variant encounters

19 Boss and Scripted-Battle Strategy Compendium
19.1 Strategy format: access, party, equipment, patterns, and recovery
19.2 First-generation battles
19.2.1 Lenoire ghost boss
19.2.2 Zaile and the Ice Mansion boss
19.2.3 Gema and the childhood scripted confrontation
19.3 Second-generation battles
19.3.1 False Queen
19.3.2 Killer Panther reunion: resolution without defeating it
19.3.3 Lava Men
19.3.4 Kandar and the Cave of Trials confrontation
19.3.5 Demon Tower gatekeepers and Jami
19.4 Third-generation battles
19.4.1 Buorn / Bohen
19.4.2 Gonz and Gema at the Tower of Boble
19.4.3 Great Temple guardians and high priest
19.5 Final-dungeon encounters and both Mildrath forms
19.6 Estark / Esterk and repeat postgame challenges
19.7 Low-resource recovery plans and common causes of failed attempts

Part V: Optional Content, Economy, and Completion

20 Small Medals and Medal King Rewards

20.1 Medal collection, exchange rules, rewards, and planning
20.2 Chronological location checklist
20.2.1 Early adulthood and the Reinhart region
20.2.2 Port Selmi, Kabochi, Ruraphin, and Salabona
20.2.3 Mountain routes, Granvania, Cave of Trials, and Demon Tower
20.2.4 Sea routes, shrines, El Heven, and key-gated revisits
20.2.5 Zenithia routes, Tower of Boble, and Great Temple
20.2.6 Demon World, Evil Mountain, and Bonus Dungeon
20.3 Searchable objects, fixed rewards, and enemy-drop medals
20.4 Location-to-map index and the final collection audit
20.5 Version-specific Mimic encounters

21 Casino, Shops, and Resource Planning

21.1 Oracleberry casino access, coins, stakes, and prize exchange
21.2 Slime races
21.3 Slot machines
21.4 Monster arena betting
21.5 Prize catalog, acquisition priorities, and equipment tradeoffs
21.6 Ordinary-play budgeting versus optional emulator-assisted methods
21.7 Town-by-town weapon, armor, and item shop inventories
21.8 Day/night availability, marriage-route support, and special vendors
21.9 Gold, experience, healing costs, and efficient purchase routes
21.10 Banks, retained valuables, sale decisions, and late-game funding

22 Secrets, Side Quests, and Optional Objectives

22.1 Reinhart revisits, family rewards, and travel privileges
22.2 Ruraphin follow-up, Benett's experiments, and Chance
22.3 Medal King Island, optional sea stops, and newly opened doors
22.4 Buorn / Bohen: timing, sealed-jar events, and Final Key access
22.5 Emblem Cave / Cave of Seals and the Royal Cloak
22.6 Hidden mountain-path treasure and the Staff of Punishment
22.7 Optional recruits, unique equipment, and reusable support items
22.8 Inventory-order Easter egg: requirements and effects
22.9 Version-specific Mimic encounters
22.10 Emulator save-state casino methods, clearly separated from normal play
22.11 Postgame secrets and version-specific misconceptions

23 Completion Checklists and Efficient Routes

23.1 Before leaving childhood: treasures, companions, and irreversible events
23.2 Before marriage and before the second-generation transition
23.3 Third-generation unlock and backtracking checklist
23.4 Every town and dungeon treasure checklist
23.5 All Small Medals and reward selections
23.6 All recruitable monster types and story companions
23.7 All unique equipment, key objects, and reusable battle tools

23.8 Spell progression, event spells, and companion level-cap goals
23.9 Before Mildrath and before entering the Bonus Dungeon
23.10 Postgame completion, repeat challenges, and optional personal goals
23.11 Suggested save checkpoints and recovery routes

Part VI: World, Town, and Dungeon Atlas

24 World Map, Towns, Services, and Travel Routes
24.1 Overworld map, region names, and location index
24.2 Travel-unlock and access-dependency diagrams
24.3 Ports, landings, Return points, carpet limits, and dragon access
24.4 Town and settlement profiles
24.4.1 Vista Port, Santa Rosa, and Alcapa / Alkapa
24.4.2 Reinhart, Nameless Nunnery, and Oracleberry
24.4.3 Port Selmi, Kabochi, and Ruraphin
24.4.4 Salabona and Mountain Village
24.4.5 Telepador, desert stops, and Medal King Castle
24.4.6 Chizod / Chizot, mountain stops, and Granvania
24.4.7 Northern Church, small shrines, and El Heven
24.4.8 Faerie Village, Faerie Palace, and Zenithian Castle
24.4.9 Shahanna and the Demon World
24.5 Service matrix: shops, inns, churches, banks, and monster storage
24.6 Generation changes, day/night differences, and key-gated searches

25 Dungeon Atlas, Puzzles, and Treasure Routes
25.1 Atlas conventions: floors, entrances, exits, switches, and treasure
25.2 First-generation maps
25.2.1 Santa Rosa Cave, including the adult revisit
25.2.2 Lenoire / Linoire Castle
25.2.3 Dwarves Cave
25.2.4 Ice Mansion
25.2.5 Thieves Cave / Reinhart Cave
25.3 Reinhart, regional side quests, and marriage maps
25.3.1 Reinhart Castle basement
25.3.2 Southern Tower
25.3.3 Ruraphin South Cave
25.3.4 West Kabochi Cave
25.3.5 Volcano Cave
25.3.6 Waterfall Cave
25.4 Mountain crossing, royal trials, and rescue maps
25.4.1 Mountain Cave, west side
25.4.2 Mountain Cave, east side
25.4.3 Cave of Trials
25.4.4 Demon Tower
25.5 Third-generation travel, Zenithia, and temple maps
25.5.1 Water Shrine: El Heven route and ring portal
25.5.2 Emblem Cave / Cave of Seals

25.5.3 Sky Tower
25.5.4 Torokko Mines / Trolley Cave
25.5.5 Forest of Illusions
25.5.6 Tower of Boble
25.5.7 Great Temple
25.6 Final and postgame dungeon maps
25.6.1 Evil Mountain
25.6.2 Bonus Dungeon
25.7 Treasure, Small Medal, key-object, and encounter overlays
25.8 Text routes and additional locations

Part VII: Appendices

26 Name Cross-Reference and Glossary
26.1 People, family relationships, and temporary companions
26.2 Towns, dungeons, regions, and vehicles
26.3 Monster species and default companion names
26.4 Spell names and aliases
26.5 Items, equipment, key objects, and naming collisions
26.6 Alternate names for lookup

27 Quick Reference Tables
27.1 Story milestones and next-objective lookup
27.2 Keys, travel unlocks, and access requirements
27.3 Human and monster spell-learning summaries
27.4 Monster level caps, recruitment regions, and party roles
27.5 Equipment compatibility, upgrades, and resistance priorities
27.6 Boss preparation, status counters, and reusable-item lookup
27.7 Small Medal rewards, casino prizes, and high-value purchases
27.8 Shops, safe recovery points, and final completion checklists

1 Game Version, Names, and Guide Conventions

Dragon Quest V begins aboard a ship, with a young boy travelling alongside his father, Papas. The first visits to Santa Rosa and Alcapa establish a comfortable rhythm of talking to townspeople, searching houses, buying equipment, and venturing into the countryside. As the journey grows, the party gains new companions and new ways to travel. Familiar places remain part of the adventure, and return visits give them fresh significance.

The game rewards attention to small details. A drawer can hold a useful healing item. A conversation can point toward the next destination. A new key can make several earlier stops worth revisiting. Keeping track of these connections makes exploration satisfying and helps the party arrive ready for the next challenge.

1.1 Game Version

Dragon Quest V: Tenkuu no Hanayome is Enix's 1992 role-playing game for the Super Famicom / SNES.

The subtitle is commonly rendered as *The Bride of the Sky* or *Bride of Heaven*. The names *Dragon Quest V*, *Dragon Quest 5*, and *DQ5* identify the same game.

Exploration, party development, and monster recruitment are central to the adventure. Several features shape the journey:

- The normal active battle party has three members. Choosing their roles and equipment is an important part of preparing for a dungeon.
- The wagon carries additional companions. Access to those companions depends on the location and the party's current circumstances.
- Each recruitable monster species has its own growth, abilities, equipment options, and maximum level.
- Keys and vehicles expand the accessible world throughout the game. A new travel ability can make an earlier destination worth another visit.

1.2 Names

One place, several names

Alcapa, Alkapa, and Arukapa identify the same town. Lenoire and Linoire are alternate spellings of the same castle. Common place names include the following:

Primary name	Alternate names
Santa Rosa	Santa Rose, Santorez
Alcapa	Alkapa, Arukapa
Lenoire Castle	Linoire Castle, Lenule, Linule
Oracleberry	Oracle Valley
Salabona	Sarabona
Granvania	Granbania, Glanvania
El Heven	Elheaven
Torokko Mines	Trolley Cave

Surroundings provide another useful way to identify a place. Its position relative to a port, mountain pass, river, or nearby town helps confirm the match. Dungeon landmarks, floor connections, and the current objective provide similar clues when a place has an unfamiliar name.

People and companion names

The *Hero* is the player-named protagonist who travels with Papas at the beginning of the adventure.

Monster companions have both a species and an individual name. A Slime Knight's species determines its growth, spells, and equipment options. Individual companions can have their own nicknames, and the roster may contain more than one member of a species.

A character's appearance, location, and abilities help establish its identity. These details are useful when several enemy or companion names resemble one another.

Spells and equipment

Blaze, *Firebal*, and *Bang* belong to separate spell families. MP cost, target pattern, and effect help identify a spell and its role in battle.

Weapons and armor have individual names, power values, eligible users, and special properties. Certain rings and staves also have item-use effects alongside their equipment properties.

2 Controls, Exploration, and Progression

A visit to town gives the party a chance to recover, hear local news, and prepare for the next trip. Out in the countryside, the same small decisions continue to matter. Healing before a difficult stretch, keeping useful items with the right companion, and remembering a convenient resting place can make a long journey considerably more comfortable.

2.1 Controller inputs, field commands, and menu navigation

Moving and choosing an action

Use the directional pad to walk and to move the cursor through menus. Approach a person or object and face it before choosing an interaction. A staircase, entrance, or passage generally connects to the next area when the party walks onto the appropriate square.

Press **A** to open the field command menu. Choose a command with the directional pad and confirm it with A. In menus, **B** cancels the current selection or closes the current window. Some actions lead through several choices, such as selecting a companion, an item, and its recipient. Read the current prompt before confirming the next choice.

The field commands

Talk: Speak to the person the leading character is facing. Shop counters and service desks are approached in the same way.

Spell: Choose a companion and one of that companion's field spells. Healing, status recovery, and travel spells appear as they become available. Select the recipient when the spell requests a target.

Status: Inspect a companion's level, attributes, HP, MP, equipment, and other personal information. Use this screen when comparing an upgrade or checking the party's condition before leaving town.

Item: Choose an owner and an object from that owner's inventory. The available actions include using, transferring, and discarding ordinary items. An item's available actions depend on the object.

Equip: Select a companion and assign suitable weapons, armor, shields, and headgear. Check the resulting attack and defense values after making a change.

Tactics: Manage party-related commands and battle behavior. Party arrangement determines the companions travelling at the front.

Door: Open the door directly ahead when the party has the required access. Approach the door square and face it before using the command.

Search: Examine the current position or the object directly ahead. This command is useful for chests, drawers, pots, and specific places on the ground.

A character-selection window identifies the companion whose spell, equipment, or inventory is being used. Confirm the owner carefully when several companions carry similar objects. Giving a Medical Herb to a front-line companion places that herb among the items that companion can use during a battle.

Working through menus

Shops, inns, churches, and storage counters lead through a short sequence of questions. Select the service, choose the companion or object involved, and review the price or destination before accepting. A purchase may also ask which companion should receive the item.

When the party has accumulated several spells or items, move through the list to inspect the available choices. Returning to the previous window lets you choose another owner or action. This is useful when distributing new equipment or preparing several companions for a dungeon.

The opening data menu handles starting an adventure and managing its save slots. Copying creates another copy of the selected adventure record. Deleting removes the chosen record. Check the displayed slot and character name carefully before confirming either operation.

2.2 Data and status screens: attributes, experience, and equipment

Checking a companion

The Status command gives a compact view of a companion's development and current condition. Begin with the name and level, then check HP and MP. Their current values show the resources available for the next trip, and their maximum values show the companion's capacity when fully recovered.

A character with ample maximum MP can still be nearly exhausted after a long dungeon. Check the current value before relying on another healing spell or planning a magical escape. The same habit helps identify a companion who needs treatment before the next battle.

Experience records progress toward the next level. Level gains can improve attributes and add spells or abilities. Check the Spell menu after a useful level gain to see which new field abilities are available. A priest's experience advice gives the amount still needed for the next level.

Attributes and equipment

Strength, agility, base defense, intelligence, and luck describe the companion's current development. Strength contributes to physical attack power. Agility influences the order of actions in battle. Base defense contributes to protection from physical attacks. Intelligence affects a monster companion's command obedience.

Attack and defense show the current results of character development and equipment. When considering a purchase, inspect the intended user's existing weapon or armor first. After equipping the replacement, check the new total and decide where the old piece will be most useful.

Special equipment properties deserve a separate look. Protection from certain attacks or status effects can be valuable in the next dungeon. Some weapons have unusual attack patterns, and some objects provide a spell-like effect when used as an item. Choose equipment with the area's enemies and the companion's role in mind.

Growth and the active party

Monster species have individual level caps. A companion approaching its cap may already have most of its available abilities. Consider its healing, support, equipment, and durability when deciding how long to keep it in the active party.

After a recruitment or party change, inspect the new companion's status, spells, and equipment. Supply suitable gear and place useful consumables in its inventory. This makes the new member ready to contribute on the next journey.

The opening data menu also provides message-speed and sound settings. Choose a comfortable text speed so that shop prices, service prompts, and conversations remain easy to follow.

2.3 Dialogue, searching, drawers, pots, chests, and hidden objects

Talking through a town

Speak to residents as you explore. Their conversations introduce nearby places, local problems, unusual visitors, and changes in the town. A shopkeeper may offer a useful destination, while another resident explains why a building or route matters.

Conversations can change after an event or at another time of day. Return to the people involved in the current objective after completing its immediate task. The next instruction, reward, or permission to proceed often comes through that follow-up conversation.

Face the person before using Talk. Across a counter, face the clerk from the customer side. When a person has moved to another room or a building has closed, check the time of day and look around the surrounding area.

Searching houses and shops

Drawers, pots, barrels, and chests can hold useful objects. Approach and face the container, then use Search. Check accessible rooms above or behind shops as well as the obvious ground-floor rooms. A small find can save a purchase or supply an item for the next trip.

The opening ship offers an immediate example. Search the drawer in the cabin for a Medical Herb. In Santa Rosa, household searches provide early supplies and equipment. These discoveries make it worth examining a new room before leaving it.

Keep some inventory space available while exploring. Transfer spare objects between companions or deposit them before a long treasure run. A party carrying a full assortment of old equipment can run short of space just as a useful new object is found.

Ground searches and unusual containers

Some objects lie on a particular square of ground. Stand on the indicated square and use Search. Details such as a flower patch, grave, well, bucket, or conspicuous corner can help identify the correct position. NPC dialogue may point toward the search area.

During a return visit, check rooms that have become accessible through a new key or event. A newly opened cellar or side room may contain several objects close together. Finish the searches in that room before returning to the main route.

Some containers begin a fixed encounter. Keep the party reasonably healed while opening unfamiliar containers in a dungeon, and have a recovery item ready in an active companion's inventory.

2.4 Day and night: access, shops, events, and changing time

A town at two different times

Day and night affect the daily life of towns. Residents move, businesses open or close, and certain people offer their services at a particular time. The change in lighting also makes it easy to recognize which part of the day the party has reached.

Oracleberry provides a useful early example. Its special merchant conducts business at night, and the fortune teller also has a nighttime routine. Visit the town during both periods to see the available services and conversations.

When a person is absent or a counter is closed, check nearby rooms and consider another time of day. A resident may explain the schedule. Some story events have their own timing and require a conversation or action before the party can continue.

Letting time pass

Travel around the countryside until the lighting changes, then enter the town at the desired time. Choose a manageable area near the entrance when waiting for night. Encounters during the walk give the party a chance to earn experience and gold, so keep healing supplies available.

An ordinary stay at an inn restores the party and brings the day around to morning. A story-directed stay may include an event. Once the party is free to move again, check the surroundings and continue the current objective.

Changing the time directly

The Day-Night spell costs 3 MP and switches between day and night when used in an appropriate field location. Select a companion who knows it through the Spell command. This becomes convenient when returning to a shop or searching for a person with a particular schedule.

The Lamp of Darkness changes day into night. Use it through the owner's Item menu when that effect is needed. Enter or revisit the town afterward to reach the nighttime activity.

2.5 Doors, keys, moving obstacles, floor hazards, and puzzles

Opening a route

Approach a closed door and face it, then use Door. Locked doors require the relevant key or learned unlocking ability. Keep important access items available to the travelling party.

The Thieves' Key knowledge opens the ordinary locks associated with that ability. The Reinhart Key is used for the castle's relevant locks. The Magic Key opens its red-framed doors, and the Final Key provides access to prison cells and other remaining key-locked doors.

A new key can make several older destinations worth revisiting. Complete the newly accessible searches in one town before moving on to the next. An entrance controlled by a story event or a mechanism requires that particular action as well.

Rocks, switches, and connected passages

Some movable obstacles can be pushed by walking into them from a suitable side. Check the clear space around the object before moving it. A passage can depend on where an obstacle ends up, so pay attention to nearby walls, doors, and floor connections.

Inspect visible switches, levers, and unusual structures. Look for the gate, track, staircase, or passage affected by the mechanism. After an action, examine the changed area before moving farther away.

In dungeons with holes, sliding floors, or one-way connections, keep track of the stairs and entrances that reconnect the rooms. A fall can lead to a different section of the same dungeon. Locate the return path before spending too many healing resources exploring its branches.

Crossing damaging terrain

Hazardous floors can reduce HP while the party moves. Check the party's condition after crossing them, especially when a battle may begin nearby. Poison can also drain HP during travel and deserves prompt treatment.

Stepguard costs 2 MP and protects the party from damaging floor tiles. Cast it before crossing an appropriate hazard. Check the party's condition as the route moves into another area, and renew the protection when needed.

If the caster is short of MP, choose a route with fewer hazardous steps and heal after the crossing. Keeping the party healthy before opening a door or entering a new room gives more room to handle an unexpected battle.

2.6 Inventory ownership, item transfer, capacity, and equipment use

The twelve-item inventory

Each companion has twelve inventory slots. Equipment occupies those slots along with consumables, spare gear, and other carried objects. Separate copies of a consumable occupy separate slots.

Leave room for discoveries before entering a treasure-rich area. Deposit unused possessions, sell ordinary spare gear when it is safe to do so, and share the carrying load among available companions. Keep the active party's recovery supplies convenient to reach.

Item ownership matters in battle. A companion uses objects from its own inventory during its turn. Give healing or status-recovery items to active members who can use them when needed. A companion with a useful reusable item should also be available for the encounter where it will be used.

Transferring and equipping

Open Item, select the current owner, choose the object, and select the transfer action. Choose the recipient and confirm the transfer. Check the recipient's remaining space when moving several objects at once.

Use Equip to assign a suitable weapon, armor piece, shield, or headgear. After a change, inspect the companion's attack and defense values. The old equipment remains a possession until it is transferred, sold, stored, or otherwise removed.

An older weapon or armor piece may suit another companion. Check the recipient's equipment options before selling it. When moving equipped gear, review both companions' equipment afterward so that each has the intended loadout.

Using objects and conserving valuables

Select Use from the object's available item actions. The game may ask for a recipient or apply the effect to the field. Medical Herbs provide healing, Antidotes treat poison, and Full Moon Herbs

treat paralysis. Their availability can help preserve a healer's MP during a long trip.

Certain weapons and other objects produce a spell-like effect when used. Their useful action may be available alongside their equipment function. Inspect the object's effect and give it to a companion who can make good use of it.

Keep important keys, event objects, and unique possessions safe. Store objects that are temporarily unnecessary when the depository accepts them. Resolve cursed equipment through the appropriate church service before trying to change an affected loadout.

2.7 Inns, churches, saving, revival, and status recovery

Resting before the next journey

An inn restores the living party's HP and MP. Speak to the innkeeper, review the cost, and accept the stay. Free resting opportunities are particularly useful during early training or while gathering enough gold for an equipment upgrade.

Check the party's condition after resting. Treat persistent ailments and revive fallen companions before setting out. A fully supplied healer and healthy front line make the next journey much more comfortable.

Church services

Speak to the priest and select the service needed:

Record Adventure: Save the current adventure. Confirm the chosen record and wait for the priest to finish the saving dialogue.

Experience advice: Learn how much experience a companion needs to reach the next level.

Revival: Restore a fallen companion to life. Select the companion and review the required payment.

Poison treatment: Remove poison from the selected companion.

Curse removal: Resolve a curse affecting a companion or its equipment through the priest's service.

Save after an important acquisition, a difficult dungeon, or a substantial party change. Before a longer expedition, visit the inn and church so that the saved record reflects the prepared party.

Recovery away from town

Healing spells and consumables let the party recover between battles. Antidote costs 2 MP and treats poison. Numboff costs 2 MP and treats paralysis. Carrying Antidotes and Full Moon Herbs gives additional options when the appropriate caster is unavailable or short of MP.

Vivify costs 10 MP and attempts to revive a fallen ally. A failed attempt requires another cast, so allow enough MP when relying on it. Revive costs 20 MP and restores a fallen ally with full HP. A Leaf of the World Tree also provides revival and is a valuable emergency possession.

After a revival, check HP, MP, and remaining supplies. A recovery spell can make it possible to finish a short route or reach the exit. A return to town provides a comfortable chance to rest, replenish items, and save.

Recovering from defeat

When the party is defeated, half of the gold being carried is lost. Banked gold remains protected. Check the party's condition after returning to the recovery point, then arrange revival, treatment, and rest.

Revisit the equipment and supply plan before trying the area again. A protective item, a different active companion, or an extra recovery object may give the party the help it needs on the next attempt.

2.8 Banks, gold storage, shopping, and selling

Depositing gold and possessions

The depository offers storage for gold and items. Oracleberry has one near Monster Gramps. Gold deposits are made in increments of 1,000 G. Keep enough spending money for the next inn stay, treatment, and planned purchases, then deposit the amount that can be set aside.

Stored gold is protected from the loss caused by defeat. Withdraw it when an equipment purchase or recovery expense is due. Keeping a reserve in the bank makes rebuilding a defeated party easier.

The item-storage service is useful for spare equipment and possessions that are being kept for later. Select the owner and object when depositing, then use the withdrawal service when the object is needed again. Leave space with the intended recipient before collecting several stored items.

When a monster is left with Monster Gramps, its carried equipment and items are transferred to the depository. Retrieve the needed possessions and equip the companion again when bringing it back into the travelling party.

Making a purchase

Speak to the shopkeeper, choose the item, and review its price and the intended recipient. Consider which active companion gains the most from the upgrade. A dependable weapon for a frequent attacker or protective gear for a vulnerable member can have an immediate effect on the next trip.

After buying equipment, assign it through Equip and check the resulting status values. Transfer useful older gear to another eligible companion. Keep enough cash for recovery and essential consumables after the purchase.

Oracleberry's nighttime merchant sells the wagon for 300 G. Having the required cash ready makes that visit convenient. Purchases tied to travel or party access are worth accounting for alongside ordinary equipment.

Selling and keeping useful objects

The selling service quotes a value before the transaction is completed. Review the object and its owner carefully. Ordinary gear that has been replaced throughout the party can provide money and free inventory space.

Keep unique objects, useful reusable items, and equipment intended for a companion who will be trained later. The depository provides space for possessions that are worth retaining. Store them together with a clear idea of which companion or journey they will support.

2.9 Travel progression: walking, wagon, ship, carpet, castle, and dragon

Walking and the wagon

On foot, follow paths through the countryside and look for the entrances to towns, caves, towers, and other destinations. Mountains and other obstacles define the available routes. Encounters along the way consume healing supplies and MP, so consider the journey to the entrance when preparing for a dungeon.

The wagon follows the party during appropriate field travel and provides room for additional companions. Arrange the active members and distribute their equipment before entering an area with restricted wagon access. Keep the supplies needed inside that area with the companions who will be available there.

Sailing

The ship opens sea routes between continents and islands. Board at its docking point and sail toward the desired coast. Choose an accessible landing place near the destination, then continue on foot.

Sea travel has its own encounters. Maintain enough healing for the voyage and the exploration after landing. A nearby town or inn can provide a convenient starting point for a longer island trip.

Remember the landing point before entering a dungeon or making a detour. The coastline and nearby landmarks help locate the ship again when the party is ready to continue.

Using the Magic Carpet

Use the Magic Carpet from its owner's inventory on suitable open ground. It carries the party across plains and water, making several routes more direct. Forests and mountains constrain its movement.

Choose a clear approach to the destination and a suitable place to land. After dismounting, walk into the town or dungeon. While travelling by carpet, X opens the world map and helps identify nearby land and routes.

The flying castle

Once Zenithia is available for travel, its movement opens another way to cross the world. Use the directional pad while controlling the castle. Press X to view the world map and check the destination before choosing the approach.

The castle's interior also provides a place to regroup during that part of the adventure. Keep the party ready for the destination reached after leaving it, especially when continuing directly into a dungeon.

Dragon travel

The Zenithian Bells summon the flying ride when they are available. Use the item outdoors and choose the desired route through the world. This form of flight provides access across terrain such as forests and mountains.

Choose a suitable landing point near the destination, then dismount and continue on foot. Check the active party and healing supplies before entering the next area. A fast flight can place the party close to a demanding dungeon with little travel in between.

2.10 Return destinations, Outside, maps, and safe backtracking

Return and Outside

Return costs 8 MP and transports the party to an available destination in its list. Towns and other eligible stops become available through the journey. Select the desired destination from the Spell command while standing in a suitable outdoor location.

Outside costs 8 MP and takes the party out of a dungeon that allows magical escape. It is useful after collecting treasure or when healing resources are running low. Once outside, the party can choose the next overland route or use Return.

If the same companion will cast both spells, keep at least 16 MP available for that trip home. Allow additional MP for any healing still needed before reaching the exit. The remaining value on the Status screen is useful when deciding whether to explore another branch.

Other travel aids

A Wing of Wyvern provides an item-based journey back to the last town visited. Carry one with an available companion and use it from a suitable outdoor position when that destination is useful.

Repel costs 4 MP and helps avoid random battles with weak enemies. Holy Water also helps ward off weak encounters. These aids can make a familiar journey more convenient as the party grows stronger.

Use the Wayfarer's Map to examine the overworld when the item is available. Compare the party's position with the coast, rivers, mountains, and nearby settlements. The map is particularly useful when a new vehicle opens a route across water or around a large obstacle.

Returning for earlier discoveries

A new key or travel ability can open several useful return visits. Choose one town or region, collect its newly accessible treasure, and then move to the next nearby stop. Visit shops that have become useful to the current party and retrieve any stored equipment needed for the trip.

Keep a short mental route through the area: the landing or Return point, the rooms to search, the services to use, and the way back to the vehicle or next destination. This makes a return visit comfortable even when the town was last explored much earlier in the adventure.

Finish a longer outing by treating ailments, restoring HP and MP, reorganizing useful possessions, and recording the adventure at a church. The party is then ready to begin its next journey from a convenient stop.

3 Combat, Tactics, and Party Management

Three active companions give every action a noticeable place in a battle. A timely heal can keep an attacker on its feet, a group spell can clear a dangerous cluster, and a defensive action can buy the party the round it needs to recover. The available companions and their equipment give the player several ways to handle the same encounter.

Watch the enemy groups, the party's condition, and the resources needed for the rest of the journey. A comfortable victory leaves enough HP, MP, and useful items to continue exploring. Against a stronger opponent, the same habits help the party settle into a sustainable sequence of attacks, support, and recovery.

3.1 Battle commands, target groups, turn order, and escape

The opening battle menu

The first battle menu offers four main actions:

Fight: Begin choosing the party's actions for the round. The current tactics determine which companions receive direct orders.

Change: Adjust the active members when reserve companions and the encounter's conditions allow it.

Tactics: Choose the battle behavior of computer-controlled companions or use the direct-command setting.

Run: Attempt to leave an encounter that permits escape.

For a companion receiving direct orders, the available commands include Attack, Spell, Parry, and Item. Attack uses the equipped weapon. Spell opens the companion's battle abilities. Parry is the defensive action, reducing incoming damage during that turn. Item opens the objects carried by that companion.

Select the action and its target, then continue through the other directly controlled members. Check the party's HP while choosing the round. A companion who is already badly injured may need healing or a defensive action before taking another heavy hit.

Reading the enemy groups

The enemy display identifies the species present and the number remaining in each group. The target menu uses those entries when selecting an offensive action. A single-target attack affects one creature in the chosen group, a group attack affects that group, and an all-enemy action reaches across the opposing formation.

Choose targets according to their immediate threat. An enemy that heals, calls reinforcements, drains MP, or inflicts a disabling condition can be worth removing early. Concentrating several attacks on its group helps reduce the number of dangerous actions the party faces in later rounds.

Group attacks are useful when several creatures of the same kind are present. An all-enemy attack becomes useful when the opposing formation contains several groups. Check which enemies remain as each new round begins and choose the next targets accordingly.

Action order and recovery timing

Agility influences when companions and enemies act. The order can vary between rounds, so allow for an enemy reaching an injured ally before the planned heal. A fast companion carrying a Medical Herb can provide another recovery option when the main healer is slower or needs a different action.

At the start of a difficult round, identify the most urgent job. This may be restoring a vulnerable ally, curing a disabling condition, reducing incoming damage, or finishing a dangerous enemy. Assign the remaining members around that action.

Parry gives a threatened companion a defensive turn while another member handles recovery. After the party is healthy enough to resume its attack, return that companion to its usual role. Keep enough recovery available to handle the next unfavorable sequence of enemy actions.

Choosing to escape

Run is useful when an encounter threatens the party's remaining supplies or the journey has already become too expensive in HP and MP. A successful escape lets the party continue from the field.

A failed attempt gives the enemies an opportunity to act. Consider the party's condition before attempting another escape, especially when one more enemy attack could bring down a companion. Healing or protecting the party can make the next attempt safer.

Some fixed battles and boss encounters restrict escape. Prepare for those encounters with a recovered party, accessible items, and a clear plan for the first few rounds.

3.2 Physical attacks, critical hits, multi-target weapons, and damage

Attack power and the enemy's defense

An ordinary physical attack uses the companion's strength and equipped weapon against the enemy's physical defense. The resulting damage varies between strikes. A stronger weapon improves the attacker's opportunities, and lowering the enemy's defense can make the whole party's physical attacks more effective.

Watch the damage produced by the current equipment. A sturdy enemy may be easier to handle after Sap or Decrease has reduced its defense. Bikill strengthens an ally's physical offense and is useful when that ally will spend several rounds attacking.

For a short encounter, attacking immediately may finish the group quickly. In a longer battle, a successful support action has time to improve several later attacks. Choose the setup according to the opponent's durability and the party's condition.

Choosing an attack pattern

Weapon properties determine how far an attack reaches:

Single-target weapons: Ordinary swords, spears, claws, and similar weapons concentrate their attack on one creature in the selected group. They suit focused attacks against a dangerous enemy or a boss.

Group weapons: Whips and weapons such as the Morning Star attack grouped enemies. They are useful when several creatures share a target entry. The Gringham Whip is a powerful example of this pattern.

All-enemy weapons: Boomerangs, including the Bladed Boomerang and Flame Boomerang, reach across the enemy formation. The Iron Ball of Decimation also attacks all enemies.

Repeated attacks: The Falcon Sword and Killer Earring produce two attacks from an attack action. Their usefulness depends on the wielder's strength, the enemy's defense, and the damage of each strike.

A Boomerang's 15 attack power and a Bladed Boomerang's 25 attack power can be useful early because their attacks reach the whole opposing formation. Give a group-clearing weapon to a companion who frequently handles ordinary encounters. Keep a suitable focused weapon available for a battle with one durable opponent.

Equipment compatibility remains important. Match the weapon's attack pattern to a companion who can equip it and use it effectively. After a change, check the resulting attack value and observe the next few battles.

Critical hits and special weapon effects

Critical hits produce heavy physical damage and are especially valuable against enemies with very high defense. They can also make an enemy's ordinary attack suddenly dangerous. Keep enough HP available to survive an unfavorable hit when exploring an unfamiliar area.

Some weapons have additional effects. The Poison Needle can produce a one-hit kill, the Demon Spear also has a possible one-hit-kill effect, and the Demon Claw can poison an enemy. Their special properties deserve consideration alongside their attack power and eligible users.

The Dragon Killer is useful against dragons. Other equipment may add an elemental property or an item-use action. Choose those properties for the opponents the party is actually fighting, and review the result when moving to another area.

3.3 Spells, special abilities, MP, and reusable battle items

Matching a spell to the formation

The Spell command includes the companion's available battle spells and abilities. Check the target pattern before choosing the action. Blaze costs 2 MP and targets one enemy, Firebal costs 4 MP and targets a group, and Bang costs 5 MP and attacks all enemies.

Use a single-target spell to concentrate damage on one important opponent. A group spell is useful against a cluster of the same species. An all-enemy spell helps when several groups are present. Enemy resistances affect the result, so watch how well the selected spell works in the current encounter.

A well-chosen offensive spell can shorten a battle and reduce the healing needed afterward. Keep the journey's remaining demands in mind when deciding how much MP to spend on an ordinary group.

Monster abilities

Monster companions bring abilities such as breath attacks, dances, physical techniques, and disruption effects. Breath attacks and many monster-specific actions provide useful options with no MP

cost. Their target patterns and effects still matter when choosing an action.

A breath user can contribute consistent damage through a long dungeon. A companion with sleep, paralysis, or disruptive abilities can help control a dangerous group. Inspect the available abilities after recruitment and after level gains so that the new options become part of the party's plan.

An ability's usefulness depends on the opponent. Switch to another useful action when a creature resists the chosen effect. Physical damage, another spell family, support, or an item can give that companion a productive turn.

Healing spells and their costs

Heal costs 2 MP, Healmore costs 5 MP, and Healall costs 7 MP. Healall restores one ally's HP completely. Choose a recovery spell that suits the injury and leaves enough resources for the next rounds.

Healus costs 18 MP and restores HP across the active party. Healusall costs 36 MP and provides full-party HP recovery. These spells become valuable when an enemy damages several companions at once.

Revival and status treatment add to the healer's workload. Keep another recovery option available so that the party can handle an injury while the main healer deals with a fallen or disabled companion.

Reusable item actions

Certain possessions provide battle effects through the Item command:

Staff of Benediction: Provides a Healmore effect when used in battle. It gives its eligible user an additional recovery action.

Staff of Antimagic: Provides a Stopspell effect, useful against an enemy that depends on spells and is vulnerable to the effect.

Sage's Stone: Restores HP to the active party and can be used repeatedly during battle.

Drum of War: Strengthens the active party's physical offense, making it useful when several members will continue attacking.

Give a useful reusable object to an available companion and select its item action during that companion's turn. Its use occupies an action, so include that action in the round's plan. A fast user can be useful when the effect needs to arrive early.

Reusable recovery can preserve a caster's MP for revival, strong healing, or support. Keep consumables available for urgent situations where another companion needs to handle the same job.

3.4 Status ailments, buffs, debuffs, resistance, and spell reflection

Responding to disabling effects

Poison, paralysis, sleep, confusion, and spell sealing can change the party's priorities in a single round. Check which companions can still act and which recovery tools are available to them.

Antidote and Antidote items treat poison. Numboff and Full Moon Herbs treat paralysis. An Angel's Bell provides a way to address confusion. Carry the relevant items with active members who can use them when an important caster is disabled.

Sleep and confusion can make a planned action unreliable. Protect the remaining available companions, keep recovery ready, and remove the enemy causing the condition when practical. If spell sealing affects the healer, use accessible item recovery while handling the encounter.

Some enemy effects drain MP. Removing that enemy early can preserve the resources needed for the rest of the dungeon. Check the healer's remaining MP after the battle before continuing.

Strengthening the party and weakening an enemy

Upper raises one ally's physical defense, and Increase strengthens the party's physical defense. They are useful against an opponent that relies on ordinary physical attacks. Bikill improves an ally's physical offense. Choose a companion likely to keep attacking for several rounds when using it.

Sap lowers a single enemy's defense, and Decrease works against a group. A successful defense reduction can improve the results of several party members' attacks. A resistant opponent may require a different plan.

Some enemies remove beneficial effects during battle. Watch for that action and reassess which support effects are worth restoring. Keep healing and immediate survival ahead of rebuilding a full set of boosts when the party has just taken heavy damage.

Breath protection and equipment resistance

Barrier helps protect the active party from breath attacks. It is useful when a strong fire or cold breath is a regular part of the opponent's attack pattern. Combine that protection with equipment suited to the same threat and enough party healing to cover the remaining damage.

Armor and accessories can provide protection from particular attacks or status effects. Inspect these properties when preparing for an area. A companion who repeatedly loses its turn to a condition may benefit from a protective item as well as a ready cure.

Enemy resistance also affects offensive spells and disabling actions. Watch the battle messages and damage results. A spell that works well against one species can have a different result against another.

Using Bounce carefully

Bounce reflects spells and can help protect a companion from a spell-heavy opponent. Plan recovery for the protected member before relying on it. Item-based healing provides a useful option while reflection is active.

An enemy using reflection also changes offensive spell selection. Physical attacks and suitable abilities or item actions give the party other ways to continue. Check the target's current condition before committing a powerful spell.

3.5 AI tactic modes and when to use direct commands

Choosing a policy

Tactics set the behavior of computer-controlled companions. The Hero's own actions are chosen through the ordinary command menu. Choose the policy that suits the current opponents, remaining resources, and length of the journey.

The six policies cover the following approaches:

All-out attack: Prioritizes strong offensive actions and powerful available spells or abilities. It suits a group that the party wants to remove quickly. Watch MP and the need for a separate healing action.

Balanced fighting: Mixes offense with recovery and useful support according to the situation. It is convenient for familiar ordinary encounters with a healthy, well-equipped party.

Support the Hero: Emphasizes assistance for the Hero through recovery, strengthening, protection, and hindering the opposition. Use it with the Hero active, able to attack, and suitably equipped.

Conserve MP: Uses physical attacks and available MP-free actions. It is useful during manageable encounters on the way to a demanding area. Keep an emergency recovery action available.

Protect life: Places greater priority on healing and defensive support. It can help a party facing dangerous ordinary groups, and its frequent recovery can consume a substantial amount of MP.

Follow orders: Gives direct control over eligible companions' actions. It is useful for precise targets, planned item use, and coordinated boss strategies.

Under an MP-conserving policy, the Hero's manually selected spells still use their normal MP costs. Check the party's resources as the route continues and change the policy when its priorities need to change.

When direct orders are useful

Use Follow orders when a specific companion needs to heal, revive, use a particular item, or apply a support effect at a planned moment. Direct orders also help coordinate several attacks against a selected enemy group.

A reusable healing item has a particular owner and uses that owner's turn. Selecting the action directly makes it easy to account for both. A second member can handle single-target recovery while the item user restores the active party.

For a boss encounter, decide the first few rounds in advance. Assign the initial defense or offense boosts, identify the main recovery member, and leave room for an urgent cure or revival. Adjust the plan as the opponent reveals its pattern.

3.6 Intelligence, obedience, and monster command restrictions

Developing reliable companions

A monster's intelligence affects its ability to follow commands consistently. A low-intelligence recruit can act on its own or fail to carry out the intended action. Keep a reliable recovery member available when training such a companion.

Raising intelligence above 20 provides a practical target for reliable obedience. Check the Status screen as the monster gains levels and review its available spells and equipment at the same time.

Intelligence Seeds provide permanent increases. Use them on the intended companion and check the resulting value after each use. This is useful for a promising species whose natural intelligence growth or level cap leaves its command reliability short of what the party needs.

Level caps and a companion's role

Maximum level varies by species. The Dancing Jewel reaches its cap at level 7, the Orc King at 30, and the Curer at 50. A Slime Knight can continue to level 99. Those limits give the companions different growth schedules.

Consider the complete set of abilities available at the current level. A companion with a low cap can still have useful support or protection, and a longer-growing species may need several levels before an important healing spell becomes available.

Keep an unreliable new recruit in a suitable training role while another member handles essential recovery. Once its intelligence and abilities support the intended job, move it into a position with more responsibility.

Temporary companions

Temporary companions such as Papas and Bella have their own battle behavior. Plan the Hero's actions around the support or offense they provide. Their autonomous actions remain part of those encounters even when the ordinary party is using direct orders.

Review the lineup after a temporary companion joins or leaves. Check the available healing, item owners, and equipment before continuing into the next difficult area.

3.7 The three-member active party and wagon reserves

Filling the active positions

The normal active party has three members. With the wagon available, the travelling roster can contain eight companions, leaving five reserve positions behind the active three.

Choose a lineup whose abilities work together. Useful jobs include physical damage, recovery, support, and attacks that reach several enemies. One companion can cover more than one job, depending on its spells, equipment, and current level.

For ordinary exploration, a group-clearing attacker, a reliable recovery member, and a durable companion make a comfortable combination. Before a stronger opponent, review its likely threats and adjust the roles. Several physical attackers can benefit from offensive support, while frequent party-wide damage creates more work for recovery.

Companions with useful combinations

A Slime Knight combines physical equipment options with healing. It starts with Heal, learns Healmore at level 5, and gains Healall at level 20. This gives it useful recovery work alongside its attacks.

An Orc King starts with Vivify, learns Healus at level 8, and gains Revive at level 11. Its developing spell list can cover both revival and party-wide healing. Keep enough MP available for those jobs when relying on it during a longer encounter.

A Curer begins with Healall and later learns additional recovery and support. It gains Increase at level 10, Vivify at 12, Healus at 18, Revive at 23, and Healusall at 30. Its role can expand substantially as it grows.

Use these combinations when distributing the party's responsibilities. A companion capable of fighting and healing can cover an urgent injury while the usual healer revives another member or restores the group.

Making the reserves useful

Reserve positions can hold another healer, an alternative attacker, a companion with a particular support ability, or a recruit being trained. Keep their equipment and condition suitable for the job they may need to perform.

Where the wagon is available, changing members can bring fresh MP or a more useful ability into the active lineup. A reserve holding an important battle item must be brought into an available position to use it during its turn.

Review both the active party and reserves before leaving town. Healing and supplies distributed across the travelling roster give more options during a long sequence of battles.

3.8 Changing members, wagon access, experience, and dungeon restrictions

Changing the lineup

Use the battle menu's Change command when the wagon and encounter permit it. Select the available companions needed for the next part of the fight, then review the new lineup before choosing its actions.

A fresh healer can take over when the original member has spent most of its MP. A durable attacker can help after a vulnerable companion has taken heavy damage. A specialist can enter to supply a protective spell or a particular item action.

The incoming companion needs its own equipment, available MP, and useful possessions. Prepare these before the fight so that the change provides an immediate benefit.

Areas with restricted wagon access

Some areas admit only the active party. Choose the three companions needed for the dungeon before entering, and give them the supplies they will need inside. Include reliable healing and a way to handle the area's important status threats.

Check access when the route moves through an entrance, floor connection, or fixed encounter. The companions available in an open-field battle can differ from the members available deeper in a dungeon.

Keep a useful battle item with a companion who will actually enter the area. The same preparation applies to required keys, recovery supplies, and any field spell needed for the way out.

Experience and training

Victories award experience to eligible living companions. In battles where the wagon is available, reserves can gain experience alongside the active members. This gives newly recruited companions a way to develop while a dependable front line handles the encounters.

Choose manageable groups when training a fragile recruit. Keep it alive and recovered, and inspect its new abilities as levels increase. A useful healing or support spell may arrive well before its final level cap.

For a dungeon with restricted access, arrange the party around the members participating in that area. Use accessible wagon battles when the goal is to develop companions waiting in reserve.

3.9 Healing economy, resource conservation, and boss preparation

Keeping a dungeon run sustainable

The journey uses HP, MP, and consumables across several encounters. Keep the main healer's remaining MP visible when deciding how far to explore. Medical Herbs can handle smaller injuries and preserve spells for the next difficult stretch.

MP-free abilities and reusable items can provide steady work through a long route. Assign those actions to companions who can use them reliably, and keep a stronger recovery option available for a dangerous round.

When escape spells are part of the return plan, reserve their cost. Outside and Return each cost 8 MP. A companion casting both needs 16 MP available for that journey home, plus any healing still needed beforehand.

Preparing for a boss

Rest the party, treat ailments, and check equipment before the approach. Fill the available inventories with useful recovery and status-treatment items. Arrange item ownership so that several active members can help when the regular healer is occupied.

Use the opponent's attack pattern to choose support. Increase helps with physical pressure, Barrier helps with breath attacks, and suitable armor can provide further protection. Offensive strengthening becomes useful when the party can keep an attacker working for several rounds.

Some enemies perform several actions in a round. Allow enough HP for the possible sequence of attacks before relying on the next heal. Keep a second recovery action available for a round in which one companion must be revived or cured.

A workable rhythm for a long fight

Begin by securing the party's immediate safety and applying useful support. Continue with focused attacks while watching HP and MP. A single-target healer can handle an isolated heavy hit, and party-wide recovery can cover a breath or spell that injures all three members.

The Sage's Stone is useful for repeated party recovery when it is available. Its user spends an action restoring the group while another companion handles a more urgent single-target heal, revival, or support spell.

The Drum of War supports a physically focused active party when available. After an enemy removes strengthening effects, restore the most useful ones as the party's condition allows. Keep the recovery plan working through those changes.

If a healer is running low on MP and the wagon is accessible, bring in a prepared reserve. Check the incoming member's item ownership and abilities before relying on the next round.

3.10 Enemy summoning, metal enemies, defeat, and recovery

Handling reinforcements

Some enemies call additional creatures into the battle. Reinforcements increase the number of actions the party must handle and can prolong an encounter that initially looked manageable.

Remove the summoner early when the party can do so safely. Keep track of the remaining groups and the abilities of newly arrived creatures. A called healer can make an enemy group harder to finish, while another disabling enemy can increase the need for recovery items.

Called creatures can also matter during recruitment. Healing monsters can appear through summoning, so watch for the species being pursued and manage the battle with that goal in mind. Keep the party healthy enough to finish the encounter.

Fighting metal enemies

Metal enemies offer valuable experience and can flee quickly. Their high defense and strong resistance to offensive magic make physical actions and critical hits important parts of the plan.

Use direct commands to concentrate suitable attacks on the metal group. A fast companion has a useful chance to act before the enemy escapes. Repeated-attack weapons such as the Falcon Sword or Killer Earring can provide additional physical strikes when an eligible user has them.

Keep ordinary enemies in the encounter under control as well. A harmful status effect or a badly injured companion can interrupt the attempt. After a successful battle, check the levels and abilities of companions who gained experience, including eligible wagon reserves.

Choose a hunting area the party can handle comfortably. Nearby recovery and dependable equipment help make repeated attempts worthwhile, and ordinary victories along the route still contribute to development.

Recovering after a difficult encounter

Treat poison and other persistent conditions, restore enough HP for the next stretch, and check the remaining MP and items. Reorganize the active party when another companion is better prepared to continue.

If the party is defeated, half of the carried gold is lost. Banked gold remains protected. Arrange revival, treatment, and rest after returning to the recovery point, then reconsider the equipment and supplies for the next attempt.

Before returning to the difficult area, identify what caused the collapse. Repeated breath damage may call for protection and group recovery. Spell sealing makes accessible healing items valuable. A sequence of heavy physical hits may require better defense, a sturdier companion, or earlier healing.

Record the recovered adventure at a church once the party is ready. The next attempt can then begin with its equipment, recovery roles, and travel plan already in place.

4 First Generation: Childhood

The childhood journey begins with Papas close at hand. Townspeople remember him, sailors speak warmly of him, and his strength makes the roads feel safe. The Hero's first independent adventures grow out of ordinary village life: a missing herbalist, a sick friend, and Bianca's determination to help an animal in trouble.

Take time to explore the houses and speak with the people along the way. The early finds have immediate value, and the shops offer enough choices to shape how comfortably the young party handles its first dungeons. Free resting places make it easy to prepare a little at a time.

4.1 Birth scene, the opening ship, and Vista Port

A name and a voyage

Choose the Hero's name when starting the adventure. The opening scene shows Papas waiting anxiously for news of a birth. When he reaches Martha, the conversation turns to their new son and the name she has chosen. The scene closes as Martha becomes unwell and Papas calls to her.

The Hero then wakes in a ship's cabin with his father. Papas suggests some fresh air, and the deck becomes the first place to explore freely. The crew's conversations establish a little of their history with Papas. The captain remembers an old kindness, the sailors know that father and son are travelling together, and the cook has his own opinion about Papas' cooking.

The cabin's Medical Herb

Search the dresser in the cabin where the Hero wakes to obtain a **Medical Herb**. Keep it for the first independent trip into a cave. The barrels around the ship are empty, and the chests in the lower crew quarters are locked during this voyage.

Walk around the deck and speak to the sailors, including the man at the helm. Visit the captain's cabin and the lower rooms with the cook and crew. After the conversations, the ship reaches Vista and the captain asks the Hero to fetch Papas.

Return to the cabin, speak to Papas, and follow him onto the deck. When he asks whether the drawers have been checked, confirm after collecting the herb. Father and son disembark, and the ship departs.

Vista Port and the first battle

At the port, Papas stops to speak with a friend and leaves the Hero free to wander nearby. The woman upstairs remembers an earlier visit by Papas and a small child. Explore the building and then leave through the port's exit when ready to continue.

Three Slimes attack as the Hero steps outside. Choose Attack and let the encounter play out. Papas arrives during the battle and quickly takes control of the situation. He heals the Hero afterward and leads the way to Santa Rosa.

Any encounters on that escorted journey are handled with Papas in the party. His post-battle healing keeps the Hero ready for the next steps. Save the Medical Herb for the time when the Hero is exploring alone.

4.2 Santa Rosa: Sancho, Bianca, supplies, and the missing herbalist

A homecoming

Papas' arrival sets the village in motion. A guard runs ahead with the news, old acquaintances greet him, and Sancho welcomes both travellers into his house. Bianca and her mother are visiting while seeking medicine for Duncan, who is ill at home in Alcapa.

Bianca takes the Hero upstairs and tries to read a book about the sky. After her mother calls her away, search the room's dresser for a **Leather Hat** and equip it on the Hero. This is the first useful piece of free defensive equipment.

Downstairs, Papas announces that he has business elsewhere. Sancho offers a place to rest, giving the Hero a convenient recovery point for his first solo adventure.

Santa Rosa's household finds

Collect these objects while looking around the village:

Leather Hat: The upstairs dresser in Sancho's house, in the room where Bianca reads to the Hero. Equip it immediately.

Medical Herb: The dresser on the ground floor of Sancho's house.

Strength Seed: The pot in Sancho's basement.

Medical Herb: The dresser upstairs in the weapon shop.

The Strength Seed permanently improves strength. The Hero is a useful recipient because he will be doing the attacking during the cave rescue. Using it now gives that improvement time to contribute to the early fights.

Together with the ship's herb, the two village herbs provide a small recovery supply. Sancho's free rest makes it practical to keep those items for occasions when the Hero is several floors from safety.

Purchase guide: Santa Rosa

The weapon shop stocks the following early weapons:

Weapon	Attack	Price
Cypress Stick	2	10 G
Bamboo Pole	5	50 G
Sharpened Bone	6	70 G
Oak Cudgel	9	130 G
Copper Sword	13	270 G

A **Bamboo Pole** is an inexpensive immediate upgrade for 50 G. It makes the first cave encounters more comfortable while the Hero builds levels and earns money. The **Oak Cudgel** is a stronger intermediate choice if 130 G is already available.

The **Copper Sword** offers the strongest attack in this shop at 270 G. It is a useful target for players who enjoy a little early training. Sancho's free rest allows repeated short trips through the upper cave, so the savings can grow safely. Choose a purchase that fits the current funds, then equip it before returning to the cave.

The cave itself contains a Leather Shield and Wayfarer's Clothes. Those finds will improve the Hero's defense during the rescue. Keep the Leather Hat equipped and focus the village's spending on a useful weapon.

Learning what has happened

Speak with the villagers and visit Bianca's mother at the inn. The man who went into the nearby cave to gather medicinal herbs has failed to return. The household in the mountain north of Sancho's home also has news of the missing herbalist.

Papas is occupied, and the Hero remains within Santa Rosa at this point. The cave entrance lies on the west side of town, near the church. Rest with Sancho, save at the church, and approach the entrance with the new weapon equipped and the herbs available.
